## ArticleFinder

[Download the Fact Sheet!](#)  
[View a Presentation](#)

[Products & Services](#) > [Databases](#) > Article Finder

ArticleFinder contains over 26 million citations of scientific, technical, and medical content with additional resources for business, law and the humanities. In addition, ArticleFinder has 8.5 million abstracts and the collection grows at a rate of over 44,000 new records every week - so information is always current.

ArticleFinder offers both a simple search option to get you started fast and an advanced search. Both natural and Boolean language query capability provide a more refined search. One of the unique features of ArticleFinder is that it contains the content of Infotrieve's eContent, Table of Contents (TOCs) and MEDLINE® databases, with direct feeds from publishers and access to several other databases all in one vast collection. With this distinctive tool, you only need to search one place to find all the information you need, when you need it.

## ARTICLE FINDER Simple Search

Help

Access the most powerful database of scientific, technical, medical, and other scholarly content. Search through 26 million citations and 8.5 million abstracts from over 54,000 journals.

With a simple or natural language search, enter individual or multiple keywords into the search box. Results returned will contain one or more of the terms you have entered. For a more detailed search, use our [Advanced Search](#).

For example: illness among children in daycare

## MEDLINE®/PubMed®

[Products & Services](#) > [Databases](#) > MEDLINE®/PubMed®

Infotrieve makes the most detailed of searches faster and the results more precise by providing direct access to MEDLINE®/ PubMed®, the most comprehensive database of medical journals available. MEDLINE is the National Library of Medicine's (NLM) database of indexed bibliographic citations and author abstracts from the top 4,500 biomedical journals published in the U.S. and more than 70 countries. MEDLINE incorporates AIDSLINE, TOXLINE and CANCELIT databases and includes reference to over 12 million citations from 1966 to the present with 2,000 new references added daily.

PubMed's robust database allows access to a superset of MEDLINE's database, containing in-process citations, selected life science journals and citations to articles from selectively indexed journals. It also provides bibliographic information from OLDMEDLINE as well as out-of-scope citations and includes a LinkOut and "See Related Article" features for more in-depth searching.

### Let Infotrieve Do the Ordering for You

Infotrieve not only provides direct access to the MEDLINE/ PubMed databases, but also makes the ordering and delivery process of your researched articles fast and easy. Once you have found the needed articles, our XML gateway allows you to place articles found on MEDLINE/PubMed directly into your Infotrieve shopping cart with just one click. If you have bookmarked NLM's MEDLINE/ PubMed, change your bookmark to Infotrieve's link to these databases, and save unnecessary steps.

In addition, Infotrieve brings value-added features to MEDLINE/ PubMed. When searching MEDLINE/ PubMed through Infotrieve's direct database access, users of our Virtual Library can also learn if citations they are searching are available in their company's library holdings. Infotrieve customers also have the ability to save MEDLINE SDI's, which allow you to save queries, and alerts with newly published articles that meet your criteria and will be automatically sent to your inbox.

7. ถ้าเลือกสืบค้นจาก MEDLINE ให้ใส่ข้อมูลที่ต้องการใช้สืบค้นลงในช่อง Query Box แล้วคลิก Go
